To: StrategizeIT assessment contact (use the address from the invitation email) **Subject:** BA Assessment, Clarification Questions, Muhammad Amjad Karara

Dear StrategizeIT Assessment Team,

Thank you for the BVDRS case study. Below are my clarification questions, in priority order. For each one I note who I would normally ask and what it changes in the BRD. Where I do not hear back, I will carry the point as a stated assumption or an open issue and will not treat it as an approved requirement.

For reference, two figures I calculated from the case: the three committees review about 240 files a week (roughly 1,040 a month) against about 1,500 new applications a month, and deciding the 38,000 backlog plus six months of new intake means about 1,800 files a week.

1. Six-month backlog target (ask: Eng. Hesham, committee chairs) Is the six-month commitment binding, and does it cover applications received during those six months? Is any change planned to committee numbers, meeting frequency or staffing? *Affects:* the objectives and KPIs, and whether the target can be written as achievable or as a phased goal.

2. Scope of the mandatory site inspection (ask: Eng. Mona, Legal Counsel) Eng. Mona states that no decision can be made without an engineer's site visit. Does that apply to every file, or could some low-risk files be decided on documents and the spatial check alone? If so, who defines "low risk" and who approves it? *Affects:* the TO-BE approval flow, engineer workload (25 engineers), and the business rules on triage.

3. Imagery frequency (ask: Eng. Hesham, Eng. Ahmed) Is weekly detection a committed Phase 1 requirement, or does Phase 1 run on the quarterly imagery that exists today? Is there budget for extra imagery or drones? *Affects:* detection scope, data dependencies, and what the detection KPI can promise.

4. Authoritative reference layers and coordinate system (ask: Eng. Mona, Eng. Ahmed, Legal Counsel) Which datasets are the approved source for the urban boundary, agricultural land, Nile protection zone, heritage zones and airport height limits? Who approves changes to them? Is an approved transformation from Egypt 1907 / Red Belt to WGS 84 / UTM 36N available, and what positional tolerance is acceptable? *Affects:* spatial eligibility rules, data requirements, and migration of the older layers.

5. Special street rates and new urban extension areas (ask: Mrs. Nagwa, pricing committee) How is a special street rate approved, recorded and dated? What should happen to an application in a new extension area before a rate exists? *Affects:* fee calculation rules, exception handling, and audit requirements.

6. Down payment when an application is rejected (ask: Mrs. Nagwa, Mr. Adel) The down payment is non-refundable, yet rejected applicants ask for it back. What is the approved position, and does a successful appeal change it? *Affects:* the refund rule and the financial side of the rejection and appeal paths.

7. Appeals and removal decisions (ask: Mr. Adel) Is the 30 days counted from notification, and how is notification proven? Does a filed appeal suspend removal? What formal notice and waiting period apply before removal, and who issues the removal decision? *Affects:* the appeal and removal exception paths, statuses, and timers.

8. Instalments and certificate timing (ask: Mrs. Nagwa, Mr. Adel) Is the certificate issued after the down payment, after the first instalment, or only after full payment? What follows a missed instalment? *Affects:* the payment rules, the certificate status that the electricity and water companies will see, and late-payment tracking.

9. National portal and civil registry (ask: Mr. Walid, Eng. Hesham) Is integration with the national digital services portal and ID verification required in Phase 1? If the ministry approval is delayed, what manual check is acceptable? *Affects:* integration scope, dependencies, and the intake process.

10. Legacy data (ask: Mr. Sayed, Mr. Walid) Are the 38,000 pending applications the same files as the roughly 40,000 paper files, or separate? Must Phase 1 digitize the full archive, or only pending files and a priority subset? What is the quality of the Oracle 11g and Excel records? *Affects:* migration scope, data capture effort, and the starting point for the backlog.

Assumptions I will use unless told otherwise

- Electricity and water companies get online certificate verification in Phase 1. Scheduling their meter installation teams is out of scope.
- Applications can come through the portal or be entered by staff at the technical centres, into one shared record.
- Field engineers work offline and sync when the connection returns.
- Where no reliable parcel exists, the applicant or clerk marks the building on the map and the GIS Unit digitizes the footprint from imagery.
- Fees, thresholds and legal periods that the case does not state will be shown as configurable parameters marked "to be confirmed", not as fixed values.

Kind regards, Muhammad Amjad Karara
